

Deactivating v2.0 / 3.0 licenses

A connexion to Internet is mandatory !

1/ Deactivate the license

Launch **infolicence.bat** from the Phase Manager installation directory (by default :
C:\Users\Public\Documents\PhaseManager2(or3)

In **Modules > PhaseManager V2 > Clé d'activation** check the serial number:  Then click on the button **Transférer la licence** :  Then click on **Désactiver maintenant** then **Suivant**. Wait for the window **'Désactivation terminée'** to display, then click on **Fin**. You can see that the license has been deactivated from this computer (mention in red : “Le module est bloqué”) : 

2/ Note about projects transfer

To transfert your projects :

Copy the entire folders without renaming them, into the new project folder.

By default the directories for saving projects are :

- C:\Users\Public\Documents\PhaseManager2(or3)\Projet

Beware : if the setting **Workspace** has been modified, the projects can be saved elsewhere:
