Areas Categories (New in v7)
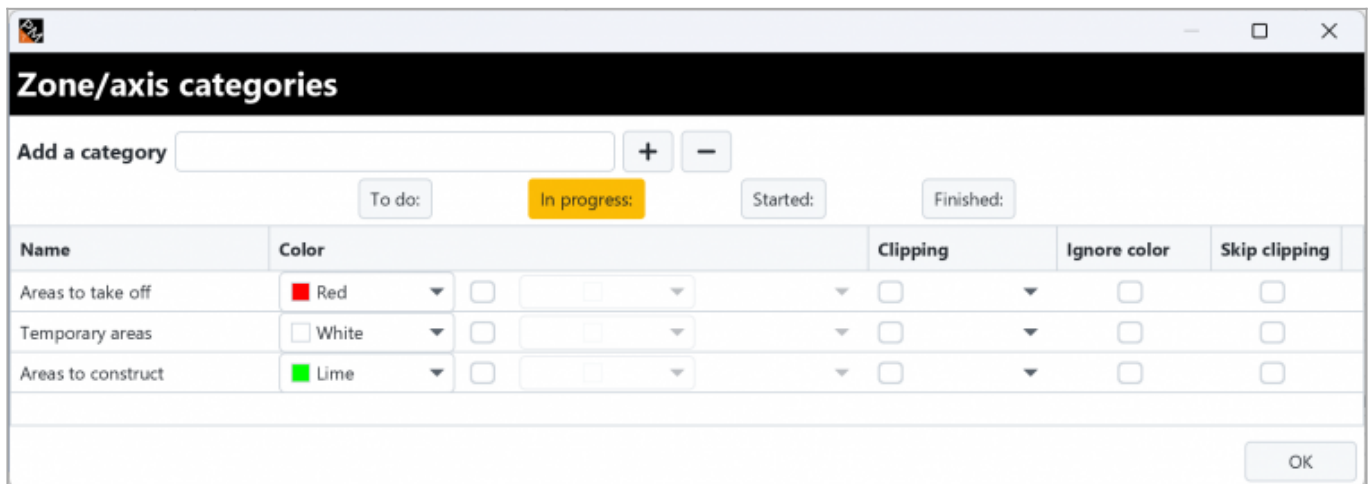

Create Phasing

In few words

With Phase Manager 7, it is now possible to define areas categories and associate them to areas. For example, you can imagine those areas categories :

- Temporary area, Area to pull down/demolish, Area to construct…
- Cross section Area, Long profile Area, Plan view profile Area…
- …

For each category, you can define a behaviour according to the area status (display color and clipping) :

Then, in the Live view or deliverables you can choose to display your project according to those categories.

- In the **LIVE VIEW**, by operating this way:

Projet Linéaire
12 impasse Bernard Lyot
85 000 LA ROCHE-SUR-YON
